Office system bizhub C352

bizhub C352

Division manager

The essentials of imaging

The catalyst for productivity

A centrally located device for a division, must ensure complete integration of the existing departmental communication and workflows and stimulate productivity. The device must be accessible in all respects, capable of enhancing the output quality, able to relieve staff from time-wasting activities, enable efficient and easy management, and generate considerable savings.

The bizhub C352, the first colour and monochrome device with embedded finishing, fulfills these goals. It represents the natural progression from small departmental network groups to division integration. It is the ideal integrated system to replace a multitude of single standalone devices, so the benefits to your organisation are wide-ranging and considerable.

■ Accessibility is a byword for the multi-functional bizhub C352. The user Box functionality ensures easy workflow including extensive scanning and optional faxing capability. Fast processing including simultaneous RIPping (preparation for printing) whilst printing and impressive print and scan speeds ensure an extraordinary level of availability. This accessibility is further enhanced by the rapid warm-up time.

■ The Administrator functions incorporated in the bizhub C352 are excellent. Set-up procedures, network integration and complete status monitoring and management of the device are all extremely easy. User and security management is comprehensive including access control and cost centers.

bizhub c352

■ Print cost control is promoted by the innovative Konica Minolta print technology, enabling the allocation of print limits and the set up of cost centers. In addition, considerable staff time savings are made with the sharing of job settings and programmes.

■ As “Division Manager”, the digital bizhub C352 very effectively improves output quality, generates successful communication, frees valuable staff time and stimulates economical flexible print output.

* optional functionality

Easy accessibility throughout

A productive, efficient division requires a central device which offers easy access to all functions when and how each user wishes, just as it is with the bizhub C352.

- The intuitive common bizhub feature set, supported by the large touch screen menu and the printer driver, ensures that all the rich functions are easily and readily available right down to the one-touch programmable job settings. Easy operation at its best.
- The user Box function assures direct access to information through storing, archiving and sharing. Standard forms, such as travel claim forms, letterheads and product information for example, can be prepared and stored, ready for immediate printing.
- Ease of external and internal communication is assured in the scan functions to any of eMail, FTP, or PC. The traditional optional fax is supported with digital functions e.g. save to a box, forward as eMail. Both are fully supported by the address book which can hold up to 2,100 entries.
- The bizhub C352 deals with print jobs in a very efficient manner thus maintaining a high level of availability. The speedy 35 prints per minute applies to both the high quality colour and high definition monochrome output thanks to the innovative tandem one-pass process. Scanning, including double-sided, runs at up to 68 originals per minute in black, and up to 50 originals per minute in full colour. Thus rapidly freeing the device for further jobs. To maximise up-time the fast processing Emperon™ print controller simultaneously Rips (processes) the next waiting job whilst printing takes place. There is virtually no break in operation.
- The Print Status Notifier saves much user time. The user is kept informed of progress, preventing unnecessary trips to the device or standing around waiting for a job to be finished.

Facilitating comprehensive management

A centrally located division device is there to serve a number of departments. The device must therefore provide a complete range of functions for an Administrator to manage and to monitor the device easily and effectively.

■ The bizhub C352 provides the required full management and monitoring with PageScope Netcare, a part of the standard installed PageScope Suite. The Administrator can access the device via intranet or internet and in addition there is automatic status notification. The Administrator always has their finger on the pulse.

■ PageScope Data Administrator also assures user management of up to 1,000 users. Access rights, rights to functions and cost centres can all be defined. Included are the specification of mode (colour or b/w) and quantity for copying, printing and security controls for external data transmission e.g. in order to safeguard company information.

■ The bizhub C352 supports the Windows Active Directory and LDAP. The first facility can be used to import user data and the second can import company address books. With these Network Management set-up functions the Administrator is well equipped.

■ In addition to the log-in security the bizhub C352 also offers a whole range of security options. Encrypted communication (SSL) ensures that even with the interception of data no security break can occur. PDF encryption prevents opening of data. Secure print means that a print job is only processed once a password has been entered at the machine thus allowing the user to supervise the print run. Within the machine data storage, security can be assured with the additional data encryption. The Administrator can rest assured that everything is secure as the bizhub C352 is security certified under ISO 15408 EAL3.

The Administrator can enjoy relaxed, efficient management and monitoring in the knowledge that the bizhub C352 will automatically deliver.

Controlling costs promotes savings

The multi-functional bizhub C352 gives all-round savings with both excellent technology and comprehensive management tools.

- The setting up of individual and group accounts facilitates the easy monitoring of actual printing and the allocation of costs to cost centres. In addition, specific rights such as limited output volumes separately for colour and monochrome can be allocated in advance. This informed focussing of print activity prevents cost overruns and promotes considerable savings.
- A modern office needs automatically finished documents so that staff are freed to concentrate on the essentials. The bizhub C352 finishing options save time and also enhance the documents image. Manual work such as sorting, insertion of colour pages, stapling, punching is unnecessary.
- In addition the fast warm-up time ensures that the device is available when needed. The Print Status Notifier saves unnecessary trips to the device before the job is complete and the output mailbin (optional) system separates jobs ensuring that collection is quick and straightforward.
- The innovative Konica Minolta technology assures greater efficiency and savings. The tandem engine one-pass printing is both very stable and reliable, effortlessly performing large output volumes irrespective of the volume distribution between colour and monochrome. Print costs are kept down.
- The bizhub C352's digital communication functionality gives savings. The user can scan to eMail for multiple addressees thus saving time and print and postal costs. Sharing of job programmes and job settings clearly saves time. Printing for need e.g. travel claim forms, avoids the costs of storage and obsolescence.

→ Direct Print

PDF, TIFF, PCL and PostScript files are directly downloaded and sent for printing. There is no need to open in the application software so the PC is immediately free.

→ HotFolder

Folders can be given specific output settings (e.g. duplex, booklet). Within the network the user has only to drag and drop the file to the shared folder containing the required settings for easy printing.

The bizhub C352 successfully combines time savings and cost control with splendid print and finishing performance.
